

EDUCATION

Fudan University, *International Politics*, Shanghai, China

2023.9-present

GPA: **3.88/4**

Courses: Quantitative Research Methods (A) Principles of Economics (A) Calculus (A) International Law (A)

Honors: Chinese National Scholarship, Fudan University Outstanding Student Scholarship, Outstanding Student Leader Award

SELF-INTRODUCTION

As an International Politics student passionate about environmental governance and sustainable finance, I thrive on untangling complex policy challenges. My experience spans both quantitative and qualitative methods, from building statistical models in R and Python to conducting text mining on policy documents and interviewing key stakeholders. Holding the CFA Certificate in ESG Investing, I bring a unique perspective that connects financial liability and the 'polluter-pays principle' to real-world governance. I am deeply motivated to apply this interdisciplinary skill set to find equitable solutions for environmental justice issues, especially where public policy, finance, and community well-being intersect.

ACADEMIC PROJECTS

Sustaining Juneau: A Policy-Driven Approach to Tourism Resilience (Meritorious Winner)

Team Leader | MCM Mathematical Contest in Modeling | Jan 2025

- Utilized Python to independently perform data collection, cleansing, and visualization of real-world policy and tourism data released by the Juneau municipal government, ensuring data integrity for model input.
- Implemented and applied a combination of algorithms, including Non-linear Regression, Logistic Regression, and the Analytic Hierarchy Process (AHP), to model policy trade-offs and derive a holistic sustainability score.
- Authored and edited the final research paper in LaTeX, ensuring precise technical and mathematical documentation of the model structure and policy recommendations.

Analysis of Cross-Regional Digital Collaborative Capacity in China's Carbon Trading Market: A Text Mining Approach Based on Relevant Policies

Team Leader | FDU-ECNU-SJTU academic forum | May 2025

- Conducted a text mining analysis (TF-IDF, LDA) on policy documents to explore the cross-regional digital collaborative capacity in China's carbon trading market.
- Conducted interviews with enterprises and the Shanghai Environment and Energy Exchange (SEEE) to validate findings and promote collaboration.
- Recognized with the "Best Paper Award" at the FDU-ECNU-SJTU academic forum

Climate Change's Impact on Transnational Migration in Bangladesh

Quantitative Research Methods (Course Project) | Dec 2024

- Utilized R for data collection, cleaning, and visualization to analyze population mobility.
- Conducted comprehensive model evaluation and optimization, performing residual analysis, heteroskedasticity tests, normality tests, and robustness checks to assess model fit and reliability.

PROFESSIONAL EXPERIENCES

Meituan | AI Strategy

2025.7-9

Business Analyst Intern Intern

- AI Foundation Model Sector Analysis**: Led industry research, developed an analytical framework, and delivered reports on market landscape and competitive dynamics to support the company's strategic decisions in the AI domain.
- Competitive Due Diligence**: Conducted in-depth analysis of 10+ leading AI companies, covering their technological roadmaps, talent organization, and capital structure to assess their core moats and predict future developments.

SKILLS

Programming & Data Tools: Python, R, Excel, Stata

Languages:

Intermediate-Level Interpreter Certificate (Shanghai)

CET-6: Score 661 / 710 TOEFL: 104

Professional Certifications: CFA Institute Certificate in ESG Investing

Other Skills: Team collaboration, project management, market research, data mining
